SAMPLE ENGINEERING DOCUMENT

This file is synthetic prototype content. It is not a hospital-approved document and it is not for clinical use.

Symptoms do not prove or exclude cancer

This sample states a limit on what symptoms mean. A symptom by itself does not prove cancer and does not rule cancer out. Symptoms are changes a person notices, such as pain, fatigue, or a change in weight. The same symptom can have many causes.

Educational use only

Use this sample only to practice document search in an engineering prototype. It must not be used to decide whether someone has cancer or to choose care. Personal concerns belong with a qualified clinician who can take a history and examine the person.

Urgent changes

Sudden severe symptoms need emergency services or urgent in-person care. This document does not assess emergencies and does not replace a call for urgent help.
